

## GED Vocabulary

*GED Vocabulary* enables students preparing for the GED test to learn the key vocabulary words for all High School Equivalency Tests, including the GED.

### The Words

*GED Vocabulary* is based on a database of over 2,000 words. For each word, there is a definition, a context sentence, a misspelling, and an audio file. The database includes the most important words students taking HSE tests need to know and understand. The words cover the five HSE subjects: (1) Reading, (2) Writing, (3) Math, (4) Science, and (5) Social Studies.

### The Activities

Students learn and practice the Vocabulary words using a variety of Flink Learning games:

- |                             |                       |
|-----------------------------|-----------------------|
| <b>Capture</b>              | <b>Match It</b>       |
| <b>Missing Elements</b>     | <b>Spelling Spill</b> |
| <b>Vocabulary Worksheet</b> | <b>Word Search</b>    |
| <b>Word Sizzler</b>         | <b>Zap</b>            |

### Student Control

Flink Learning products are student-controlled. By this, we mean that students choose not only when and where they use them, but also, what they work on without limitations. They are free to choose any activity at any level, and to repeat activities as they need or wish. They use information about their performance on each activity to decide whether to repeat it, move on to a more difficult one, or to do something else entirely. In general, the large amount of research on learning shows that "the degree to which students learn how to control their own learning ... was highly related to outcomes." (Hattie, John. *Visible Learning: a Synthesis of Meta-Analyses Relating to Achievement*, 2009, P. 48.)
